

Statement of Purpose (Study Permit Application)

To:
Visa Officer
Immigration, Refugees and Citizenship Canada (IRCC)

Subject: Study Permit Application – Associate of Science (Computer Science), Alexander College

Dear Visa Officer,

My name is Babajide Kotun, a Nigerian citizen applying for a Canadian study permit to pursue the Associate of Science (Computer Science) program at Alexander College in British Columbia, Canada.

Academic Background and Interest in Technology

I completed my West African Senior School Certificate Examination (WAEC) in 2020. Following secondary school, I developed a strong interest in technology and software development. I dedicated my time to self-learning through online educational resources, coding practice, and personal web development projects. Through this process, I gained practical experience in web design and front-end development while building websites and maintaining a portfolio of projects. To further strengthen my technical skills, I enrolled in Front-End Development training at New Horizons. This formal training complemented my self-directed learning and provided a structured understanding of modern web technologies. I am also currently gaining practical exposure through a remote web design internship, which continues to improve my technical and professional skills.

Why I Chose Canada and Alexander College

I chose Canada because of its globally respected education system, commitment to innovation, and strong reputation in science and technology education. Canada offers a learning environment that encourages academic growth, practical skills development, and exposure to modern technological advancements. After carefully researching various institutions, I selected Alexander College because its Associate of Science (Computer Science) program provides the academic foundation necessary for my future educational goals. The program's curriculum will strengthen my knowledge of computer science, programming, mathematics, and analytical problem-solving while preparing me for further university studies.

Future Academic and Career Goals

My long-term objective is to pursue advanced studies in Artificial Intelligence and Robotics. The Associate of Science program represents an important step toward achieving this goal by providing the strong academic foundation required for future specialization. I intend to continue my education after completing this program and build a career in technology focused on innovation and emerging technologies.

Financial Support

My studies will be fully financed by my parents. My mother, who is self-employed in the beverage business, serves as the primary sponsor and maintains the funds designated for my education. My father, who is employed at a nursing home in the United States, has also provided substantial financial support. The available funds originate from legitimate family resources, including proceeds from the sale of family-owned land, repayment of funds previously owed to my father, and additional support from my father's employment income. Supporting documentation has been

included to verify the source and availability of these funds. Furthermore, my tuition fees have already been paid in full to Alexander College.

Conclusion

I am committed to complying with all conditions of my study permit and focusing on my academic objectives throughout my stay in Canada. I respectfully request favorable consideration of my application and thank you for your time and attention.

Sincerely,

Babajide Kotun
